SUMMARY

Final-year Computer Science student at Monash University with experience in full-stack development, object-oriented programming, JavaScript/TypeScript, databases, and Python automation. Experienced in developing web applications, implementing programming projects, and building software solutions through academic, hackathon, and industry projects. I am currently seeking a 12-week internship (from 23rd November 2026 until 12th February 2027) where I can contribute to software development projects and further develop my engineering skills.

EDUCATION

Bachelor of Computer Science
Monash University

October 2024 - Present

- Latest CGPA: 3.513
 - Relevant Coursework: Full-Stack Development, Algorithms & Data Structures, Object-Oriented Design & Implementation, Databases, Programming Paradigms, Cloud Computing
-

TECHNICAL SKILLS

Programming & Data: Python, Java, JavaScript, TypeScript, C, SQL, R

Web Development: Angular, Node.js, Express.js

Databases: MongoDB, Oracle SQL

Cloud: Google Cloud, Oracle Cloud, AWS

Tools & Technologies: Git, Figma, Grafana, Zabbix, Notion AI, Claude

EXPERIENCES

Monash-Warwick Alliance
TeaMWork Internship 2026

June 2026 - July 2026

- Coordinated project operations for an international virtual team, where we collaborated with a multidisciplinary team to analyse a real-world marketing case for Giving Tuesday Greece.
- Supported project planning, documentation, and cross-cultural teamwork to ensure timely progress and effective stakeholder communication.

CMG Dataware Sdn Bhd
Industrial Trainee

November 2025 - February 2026

- Developed Python automation using the Zabbix API and pandas to generate SLA and trigger reports, improving reporting capabilities beyond built-in CSV exports.
 - Conducted R&D for the evaluation and upgrade of Zabbix monitoring from version 2.x to 7.4.
 - Designed and implemented Grafana dashboards and alerting integrated with Zabbix to visualise system health, SLA metrics, and problem events for monitoring.
-

PROJECTS

StudyBridge (Full-Stack Web Application using MEAN Stack)

- Developing a student-to-student marketplace connecting learners with tutors based on subject, availability, and reputation.
- Implementing full-stack functionality across the frontend, backend, and database to support the platform's core user workflows.

Lost & Found Community Channel (Hackathon Project using Notion AI & Custom Agents)

- Built a community-driven lost-and-found solution within a 3-hour hackathon using Notion AI and custom agents.
- Rapidly prototyped the frontend website using Claude, translating a team concept into a functional prototype under a strict time constraint.

Functional Reactive Programming Games (using JavaScript & TypeScript)

- Implemented functionality for Flappy Bird and Wordle using functional reactive programming principles.
- Applied event-driven programming concepts to manage game interactions and state changes.

Object-Oriented Game Development (using Python & Java)

- Developed game functionality using Python and Java while applying object-oriented programming principles.
-

VOLUNTEERING & LEADERSHIP

Women in IT Monash (UnITy)

August 2026 - Present

Marketing and Outreach Officer

- Created promotional content and supported outreach initiatives to increase student engagement with society events and opportunities.

Monash University Volunteer Program

July 2025 - December 2025

Publicity Officer

- Designed promotional materials, managed social media content, and supported event communications.
